

CONTROLLING REMOTE STORAGE DEVICES

Abstract of the Disclosure

5 A messaging system may enable a server to assign
unique identifiers to a plurality of clients. These
identifiers enable a client to determine whether a message
is specifically targeted to that client or, as an
alternative, whether the client is a member of a group of
targeted clients. A server may send messages containing an
identifier to agents on one or more clients. The
10 identifier may specify commands to control the storage of
information on one or more clients.
